# How Can I be Successful in Honors Biology?

## During Class:

Come prepared

Actively take notes- use different colors if doing diagrams, put things in your own words

Ask questions if confused

Write down anything that is written on the board during class, it IS important!

If the teacher repeats something multiple times, it IS important! Write it down!

## After Class:

Read the sections of the book that go along with the class discussions/activities

Rewrite notes in your own words

Turn notes into questions to quiz yourself

Create a quizlet of vocabulary terms

Create flashcards to study

Find online resources help reinforce what you learn in class (Bozeman, Amoeba Sisters, etc…)

## Study Tips:

Form peer study groups with other Honors Biology students

Quiz yourself from the notes and resources you create

Create mnemonic devices to help study Example: "I Picked My Apples Today" to remember the phases of mitosis (Interphase, Prophase, Metaphase, Anaphase)

If the topics utilize a diagram, create a blank copy of it and fill in the blanks to quiz yourself on the process

Create a concept map of the content

Study out loud with peers or family members, try explaining or teaching them what you are studying
